PROVEN SUCCESS

Alutiiq 3SG, LLC provided valuable biometric and biographic information exchanges between the U.S. and Mexico. This strengthened the National Immigration Institute's infrastructure for the accurate identification of persons of interest through biometric enrollment and self-service verification kiosks at three Mexican airports located in Mexico City, Cancun, and Los Cabos.

Alutiiq Technical Services, LLC supports the DOS/INL assistance to Mexico law enforcement operations by providing training to build the capacity of Mexican security forces, including specialized investigative/ analytical and operational units. Topics of instruction include, basic police skills, firearms and tactics, community oriented policing, police supervision & management, intelligence analysis, basic & specialized criminal investigation, instructor development, curriculum development, and training evaluation. Police instructors provide training to foreign counterparts on several law enforcement topics to reduce levels of violence and strengthen the Rule of Law in Mexico.

"911 Managers around the region & within the U.S. cannot fathom how such a feat was accomplished with such an aggressive schedule."

- Department of State NG 911 "exceptional" CPARS excerpt

OUR CUSTOMERS

We built a centralized, integral, fault tolerant database for all migratory information, including a centralized biometric identity management, information exchange, & IT central infrastructure.
